Graph based data mining

Doctoral School: Doctoral School of Computer Science  
Institute: University of Szeged  
Supervisor: Miklós Krész  

Topic Description:
During the last years mining of unstructured data became a relevant filed both in business (telecommunications, finance, engineering) and research (bioinformatics, sociology, economics) applications. Among seemingly unstructured data sets, hidden graph structures are proved to be very useful in the analysis. The research goal is to develop efficient models and algorithms in the framework of graph based data mining, which are capable to solve real problems in the analysis of „Big Data”.

Admissible number of students: 2  
Deadline for applications: 2016-09-30
