This programme is available only in Hungarian.

The normal duration of the program is 5 semesters. Students are accepted in this program who have a BSc degree specialized in informatics and had preliminary courses in teaching methodology. The goal of the teacher training program is to provide teachers who have the right and competencies to teach the subject of informatics in all types of schools or courses. They will also help the use of informatics and information technologies in a wide range of other school subjects. The teachers will be able to use professionally the computer tools and to carry out programming tasks. In addition, they will be ready to develop their knowledge continuously by self-education or in refreshment courses and are also able to conduct research work, and to continue their studies at PhD level.
