The Institute of Informatics was established in 1990, as an independent unit of the Faculty of Science and Informatics of the University of Szeged. Our mission is to provide up-to-date and reliable education of information technology for the students of the Faculty, mainly within the framework of our programs.

Our institute offers various educational programs for students interested in informatics:

- **BSc in Information Technology** – provides basic knowledge of informatics for students leaving high school and entering higher education.
- **MSc in Information Technology** – students graduating from the BSc program can continue their studies here.
- **Teacher of informatics** – for those who wish to pursue a career as a high school teacher.
- **Doctoral School of Computer Science** – where graduates interested more deeply in science have the possibility to join academic research.
- **IT Basics** – provides a safe bases of informatics knowledge for students starting our MSc program.

Supporting gifted students is also an important goal of the Institute. We are dedicated to help talented young people, who might become the new generation of researchers in the future, reach full potential of their abilities. For this reason, our board of teachers includes only internationally acknowledged researchers with significant scientific achievement.
