

Information for Reviewers

We recommend you to read the paper by [Alan Jay Smith](#) [1] called [Task of the Referee](#) [2] before completing your review. In short, referees are requested to determine

- if the work presented is correct,
- whether the problem studied and the results obtained are new and significant,
- if the quality of the presentation is satisfactory, or can be made so; and what revisions and changes to the paper are necessary and/or desirable.

The managing editor completes a plagiarism analysis, i.e. the referees can be sure that no substantial overlapping can be proven with scientific works of the authors or other.

Review form: [\[txt\]](#) [3]
