UCL

Geometrical Problem

- What geometrical shape can you form from
12 Pentagons
20 Hexagons
With sides of equal length

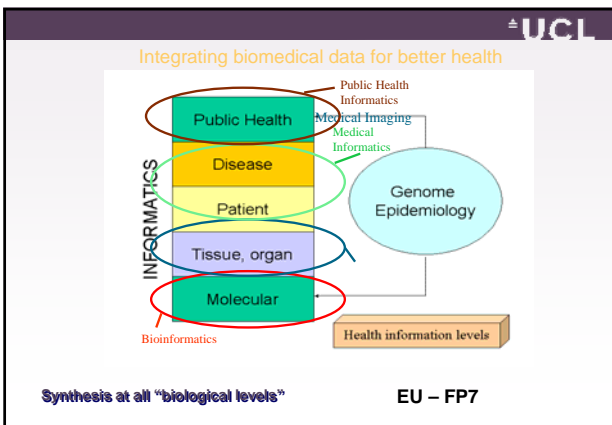

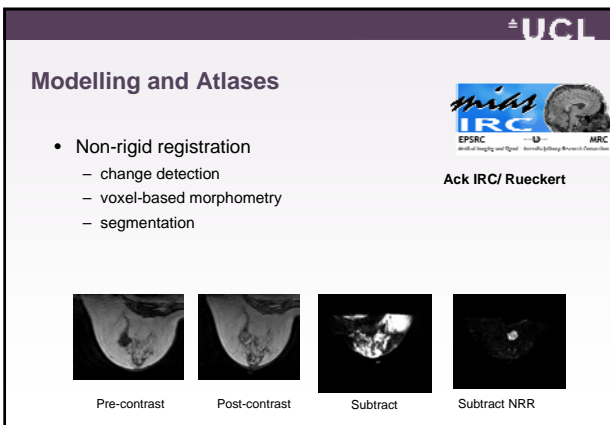

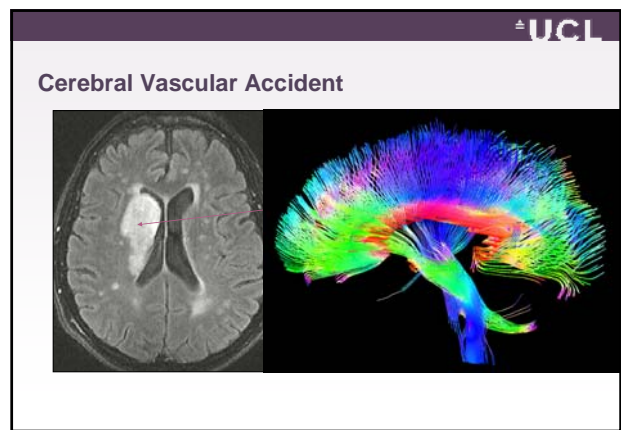

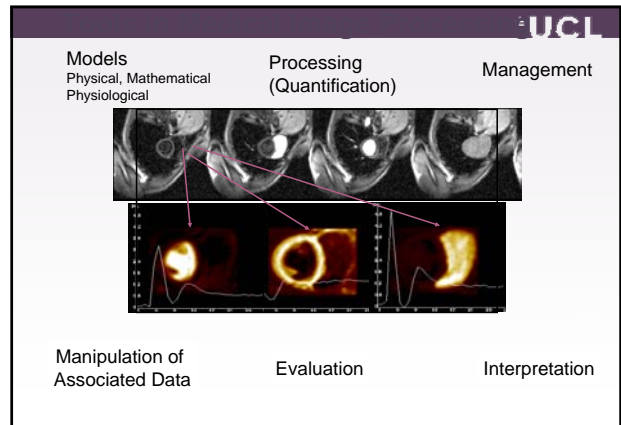

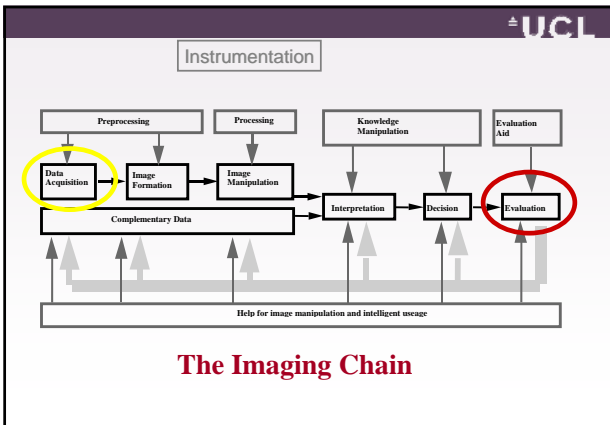

Overview (roadmap)

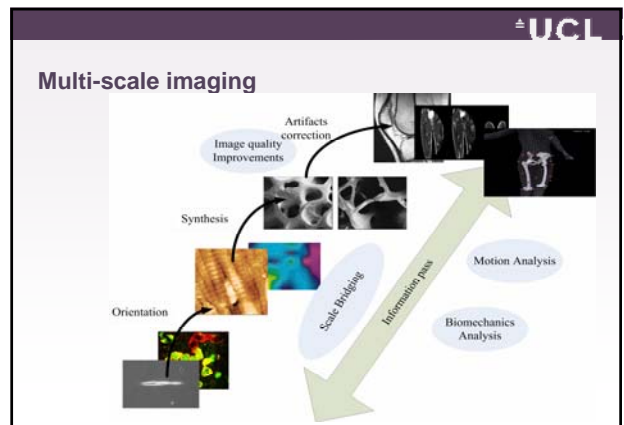

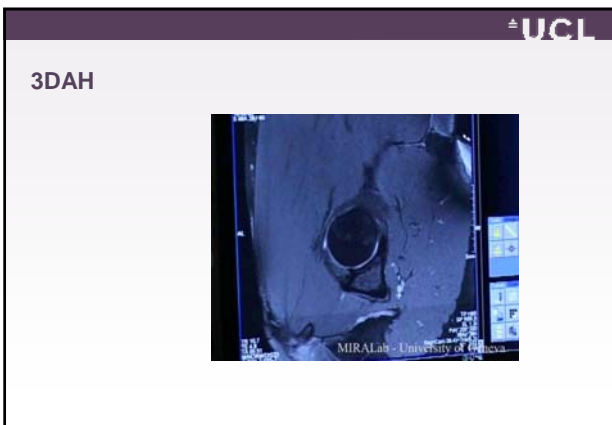

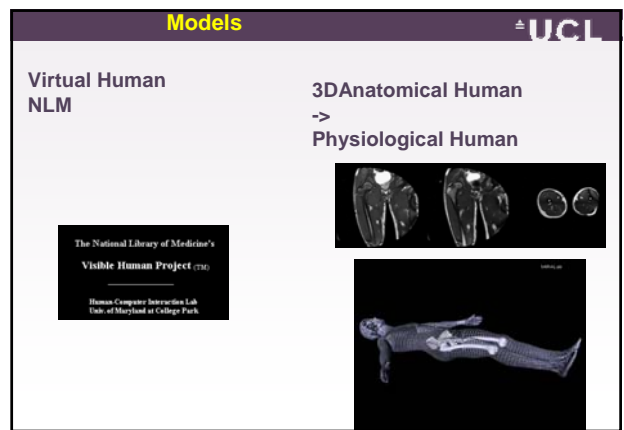

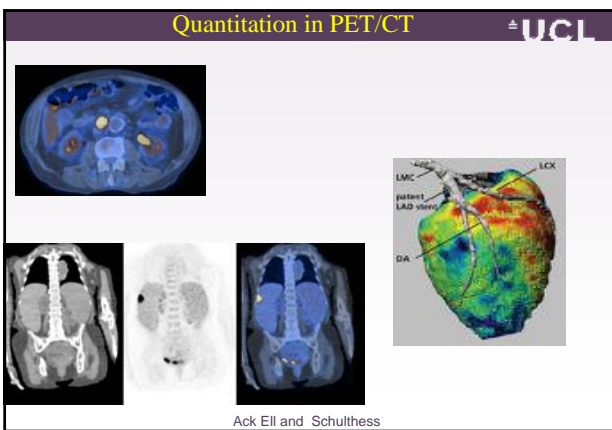

- Some tools
 - Segmentation
 - Registration
 - Quantification
 - Modelling
- Some issues
 - 1) Issues of Bandwidth
 - Intelligent acquisition
 - Motion correction
 - 2) Partial Volume
 - Multi-scale imaging
 - 3) Image Fusion
 - Therapy

UCL

1) Bandwidth

- Adequate spatial resolution
- Adequate temporal resolution
- Correct of artefacts (such as motion)

MRI

UCL

Bandwidth in terms of spatial resolution

Clinical Issues

UCL

Cardiac acquisition (and registration)

Bandwidth in terms of temporal resolution

UCL

Examples

- Improved temporal resolution through undersampling
- Free-breathing imaging of the heart in 2D

MRI image formation: recap

UCL

Why does MR take time?
Field of View (FoV)

MRI image formation: recap

UCL

Why does MR take time?
1/4 Field of View (FoV)

UCL

Pushing the temporal resolution boundary:

- There are relevant applications where lattice sampling is not possible:

Michael Hansen, et al, ISMRM 2006

UCL

Dealing with motion

Respiratory motion

UCL

In cardiac imaging, we have to deal with cardiac and respiratory motion

FIG. 4. Sequence timing for data acquisition showing the ECG trace, trigger delay and the position of the navigator, prepulses and acquisition with respect to the trace. Data are acquired continuously throughout the breathing cycle.

UCL

Registration

Free breathing cardiac imaging

Blurred spine
Sharp spine

No correction Rigid body correction Non-rigid correction using results of fluid regn.

McLeish et al MRM 52: 2004

UCL

Registration and Prediction

Under Sampled recon

Sliding window estimate

Multi prediction

Predicted

UCL

Respiration correction and PET/CT

Paired CT volumes acquired in inspiration and expiration: same patient position

Ack. Slomka

2) Partial volume effects

- Correction
- Towards multi-scale imaging

Partial volume effects

- When slice is not fully occupied
- When object is comparable to resolution in slice
- Spatially variant
- Dependent on object shape
- Probably the key limitation with respect to quantification

Depth Dependent Resolution Recovery

3 Point Sources

Ack. O'Connor

The use of higher resolution data (CT...) to correct for Attenuation and partial volume

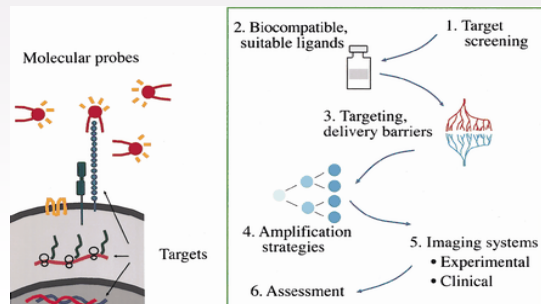

G El Fakhr et al. Absolute activity quantitation in simultaneous I-123/Tc-99m brain SPECT. J Nucl Med 2001; 42 : 300-308.

Molecular Imaging

- Viewing physiological processes
 - Direct uptake of tracers
 - Indirectly via activated receptors
 - Major applications
 - Oncology
 - Cardiology
 - Neurology
 - Impact on gene expression and therapy

The process

Drug discovery and small animal scanners UCL

Rat bone scan

- Rat: 400g, 65x250mm
- 5mCi Tc99m-MDP
- 30min. scan, 1.5h p.i.
- Apm3, $\phi=2.0\text{mm}$
- scan range 250mm

zoom of rat spine 250mm 400g rat 50mm 30g mouse

Ack Schramm

Dual Modality Imaging UCL

PET Optical

Sub-voxel operations UCL

- Label on sub-pixel are defined from higher resolution image
- Higher resolution image resolution downgraded to SPECT/PT pixel size
- PVE defined if no. of compartments (labels) is fixed.

PVE corrections UCL

- PVElab (FP6 project)

But: How do you evaluate?

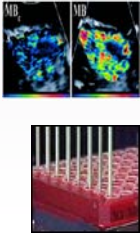

- True positive and false positive rates
- Probabilistic distances
 - Hausdorff distance (largest difference)
- Volume and volume overlap
- Interclass correlation coefficient
 - Williams (modified) index
- ??? How to measure false negatives???
